

Hello,

Thank you for considering my application. My name is Tony Nahra, and I am an advanced full stack developer with extensive experience in Data Science.

Beyond my general CV, I would like to highlight my strong database and data analytics skills. I recently completed the Microsoft DP-600 Fabric Analytics Engineer Associate certification, Oracle Data Science Professional and I worked on Google Analytics and Looker.

I have created thousands of complex SQL stored procedures, views, and web services to deliver content effectively to customers' portals. Furthermore, I developed user-friendly UI interfaces for data visualization, usage dashboards, and the generation of periodic client reports with Excel integration through VBA add-ins that I developed. I have used Tableau, Python, Google App Scripts and HTML5 UI libraries and I included some samples in my extended CV. My strong statistical background further complements these capabilities.

Based on my experience and accomplishments, I am confident that I meet and exceed the requirements for this position. I am eager to learn more about this opportunity and present my project portfolio in person.

Thank you for your time and consideration.

Sincerely,
Tony Nahra
